COURSE MENTOR

Course Overview

The 'Practice Pedodontics' Workshop is a dynamic and immersive learning experience designed for dental professionals seeking to enhance their expertise in pediatric dentistry. This workshop combines theoretical knowledge with hands-on practical sessions to equip participants with the skills and confidence to provide high-quality dental care to children and adolescents.

Course Objectives

Understand the physiological and psychological development of children and adolescents in relation to dental care.

Develop effective communication strategies to establish trust and rapport with pediatric patients and their parents.

Learn techniques for behavior management and the management of anxious or uncooperative pediatric patients.

Master preventive measures, including fluoride therapy, sealants, and nutritional counseling, to promote optimal oral health in pediatric populations.

Gain proficiency in diagnosing and treating common pediatric dental conditions, such as dental caries, malocclusions, and developmental anomalies.

Acquire skills in restorative procedures tailored to the unique needs of pediatric patients, including restorations, crowns, space management and pulp therapy in primary as well as young permanent teeth.

Familiarize oneself with the use of sedation and anesthesia techniques in pediatric dentistry, ensuring safe and comfortable treatment experiences.

Explore interdisciplinary approaches to pediatric dental care, collaborating with pediatricians, orthodontists, and other healthcare professionals as needed.

**PRACTICE
PEDODONTICS**

A THREE-DAY PEDIATRIC DENTISTRY WORKSHOP

Course Structure

Lectures

Expert-led presentations covering foundational knowledge in pediatric dentistry, including behavior management, preventive techniques, restorative procedures and pulp therapy, space maintenance, trauma management and interceptive orthodontic procedures.

Hands-on Workshops

Practical sessions focusing on clinical skills development, such as pit and fissure sealants, silver diamine fluoride application, cavity preparation, stainless steel, zirconia and strip crown placement, pulp therapy in primary and young permanent teeth and space management techniques.

Case Studies

Analysis of real-life pediatric dental cases to reinforce diagnostic and treatment planning skills.
